# PupVitals | Design 1: ArUco tracking

A4 paper. Print at 100% / Actual size. Turn off Fit to page.

Cut around the dashed outline. Preserve the complete white margin.

### ArUco DICT_4X4_50 / ID 0

Black square: 24 x 24 mm

White margin: 4 mm per side

Complete marker card: 32 x 32 mm

## Mount and test Design 1

1. Attach the marker to a removable rigid tab fixed to the pad.
2. Keep the injection area, tubes, and sensor positions clear.
3. Keep the complete marker flat, sharp, and visible to the camera.
4. Start the ArUco experiment with marker ID 0 and camera 0.
5. Show the marker, hide it, then uncover it to check reacquisition.
6. Keep the pad stationary; test small camera movements separately.
7. Press q or Esc in the preview to stop and release the camera.

**Later: Designs 2 and 3 use the unchanged pad.**

Remove printed targets. No added texture helper is used in those trials.

## Print scale check

Measure between the end ticks: exactly 50 mm.

Measure the printed black square before recording any physical scale.

Artwork sizes are proposals. Camera and 3D registration remain uncalibrated.

Digital artwork checks are synthetic; physical tracking still needs a camera trial.
